

# Rules

**The goal of the game is to guide a drop of liquid into the glass using physics and surrounding objects. The drop falls from above, interacting with various surfaces, and the player must calculate the trajectory correctly. Platforms, slopes, and glasses affect the liquid's movement, while some objects may break upon contact. The level is completed when a sufficient amount of liquid reaches the glass. Plan your moves, use physics to your advantage, and overcome challenging obstacles!**
